

Denzel game idea

Best out of
7 - rounds

border forces player to middle

- top down (angled) perspective
- 3D - game (player + arena)

Move to area (right click location)

↳ Limited rate (=cooldown)

Classes → classical

→ different abilities

Skill-trees

↳ improves them

ability hotbar

gameplay: Focus on Skill shots with abilities

MVP

- Arena (empty / 1 arena)
- Multiplayer
- Attacks (max. 3 types)
- movement
- graphics = untextured shapes

→ Expansion / finishing requirements

- classes
 - Skill trees
 - balancing
- more arena's
- graphics
 - modelling
 - texturing
 - animations
- Sound

Additional (ideas)

- controller support?
 - verified steam deck?
- Linux + win version
- game - modes?
- challenges?
- Randomly generated arena's?
- Solo - mode?

{ think well before expanding }
game scope ?

Questions for Denzel

- 3v3 or up to 3v3? (1v1, 2v2, 1v2, ...)
- "Skill" focus or "party-game" focus?

↓
(think mule / LoL)

↓
(think stick fight)

→ Controller support and steam deck version
| may clash with skill focus.
| Making game unfun on controller.

- goal? What should players feel leaving your game?
 - LoL feeling \neq Stick fight feeling
 - Can losing be fun? or will only winners have a good time.
- gameplay goal?
 - Skillshots, but why?

Notes

- Reyben can maybe help modeling and lighting
 - ↳ See portal he modelled
- Arne can help with QC and planning (maybe modeling or texturing a bit)
- Nick can check class logic
- Jonjon (+ Reyben) good playtesters to try and break stuff / give very honest opinion
- Arne good playtester for creating detailed responses splitting opinion from analysis
- You had help in graphical department and animating already
- Audio is often overlooked, not really anyone's specialty
 - ↳ maybe find someone if game is nearing final stages
- dedicated servers but also peer-to-peer (steam Api?) is a must!
 - ↳ Figure out how-to without port forwarding manually.

Goals / planning

1. MVP → deadline : 1 / 11 / 2023
- 2. playtesting and feedback !
3. Deciding "final" scope
↳ Split into goals
- 4. Build goals (with help / support where needed / wanted)
- ↳ 5. Release game V1.0
